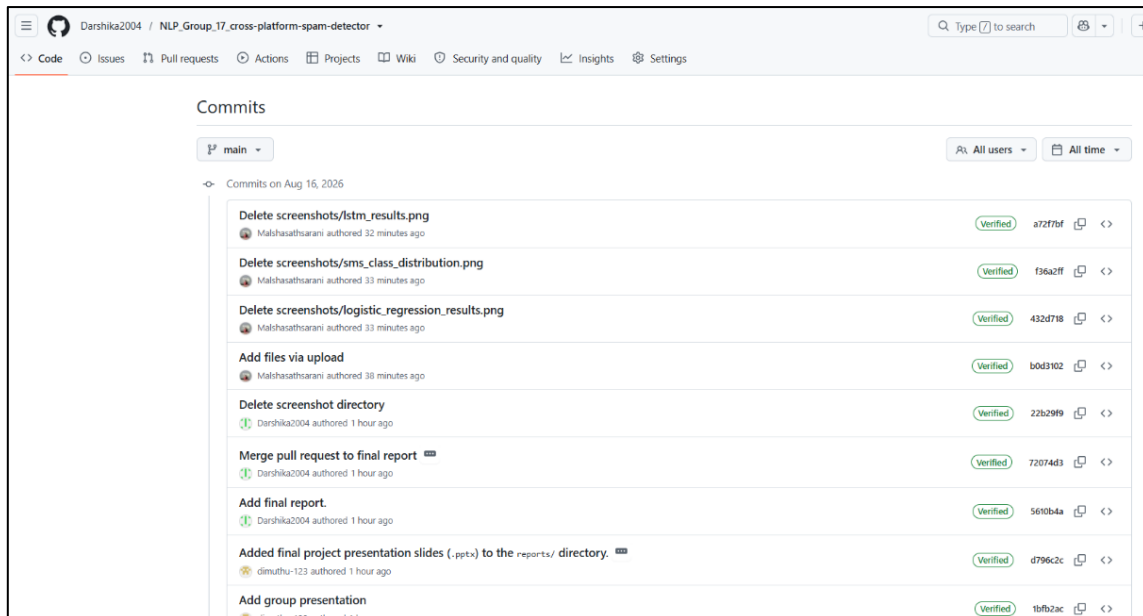

Figure 3: Commit History and Version-Control Logs

This screenshot illustrates the primary structure and version-control status of the **NLP_Group_17_cross-platform-spam-detector** repository. It highlights the following main components:

- **Repository Name:** NLP_Group_17_cross-platform-spam-detector (Public repository hosted under Darshika2004).
- **Project Structure:** Clear directory organization containing essential folders (such as data, models, notebooks, reports, src, and videos) alongside standard root files like .gitignore, README.md, and requirements.txt.
- **Branch Management:** Multiple active branches including the default main branch and dedicated feature branches (feature/CIT-24-01-0260-model, feature/CIT-24-01-0428-model, and feature/CIT-24-01-0468-model) used for collaborative development.
- **Commit Information:** Displays version history tracking total commit activity, recent commit messages, contributor details, and unique commit hashes ensuring full auditability of code changes.
